

Achieve Smarter Energy Management

Take control of your energy use. Protect temperature-sensitive assets and lower your energy bills with smart thermostats.

SAVE ENERGY, SAVE MONEY

Automation

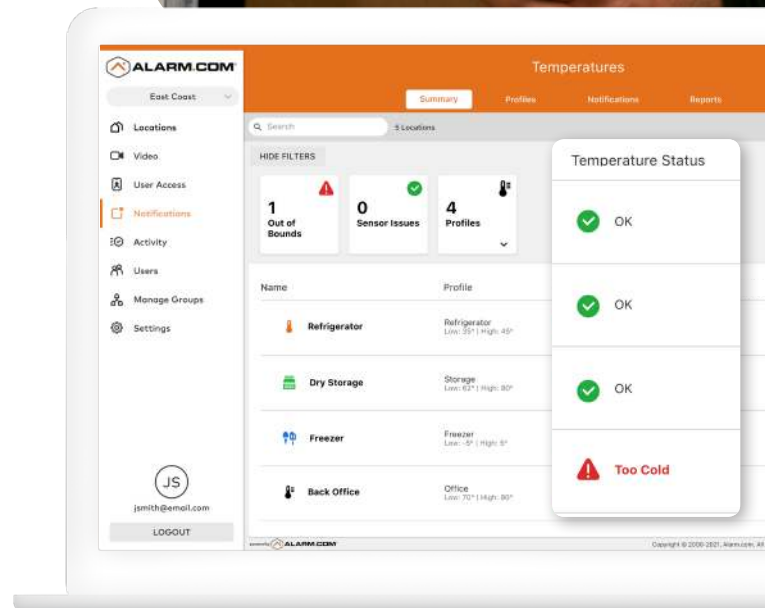

Save energy during off hours and lower your monthly power bills by automating thermostat schedules.

Notification

Set alerts to notify you when employees adjust the thermostat or set lock out rules to limit the number of people managing the system.

Location

Use the energy dashboard to view current temperatures and control setpoints for multiple locations from wherever you are.

Customers Share their Success

"I can look at videos, set the temperature schedules, and arm the [business] system all from one app."

NO WIFI? NO PROBLEM

LTE and Battery-Powered

Our technology helps you ensure critical temperatures are monitored—even if the power goes out or the internet goes down.

Extreme Support

An optional 11' waterproof probe has a range of -22°F – 158°F (-30°C – 70°C) and functions from a distance of up to 1.2 miles away.

Easy Installation

Long-range wireless technology makes installation a breeze, with no complicated wires to run and connect.

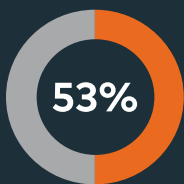

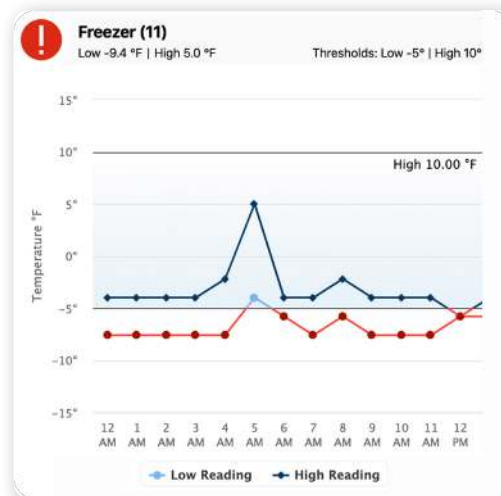

SMARTER BUSINESS TEMPERATURE MONITORING

What happens when the same power source that powers your freezer or HVAC also powers all your temperature sensors? Protect valuable inventory and key business assets with long-life, battery-powered sensors and LTE wireless technology.

Monitor the temperatures of freezers, refrigerators, server rooms, medical supplies, and more.

Receive alerts if temperatures exceed a set range.

Easily generate real-time temperature record reports for compliance purposes.

A Higher Degree of Savings

53% of businesses say they're "very" concerned about reducing energy costs, and some businesses report saving >20% on energy bills when using a smart thermostat.¹
